

# The 19th International Workshop on Neutrinos from Accelerators (NUFACT2017)

Contribution ID: 76

Type: **talk**

## **SMEFT and charged lepton flavour violation**

*Friday, 29 September 2017 11:30 (20 minutes)*

This talk reviews recent theoretical developments in the study of charged lepton flavour violation. It describes the recent progress in the effective field theory interpretation of charged lepton-flavour violating observables in connection with different energy scales by exploiting the SMEFT framework. A systematic approach is briefly presented and applications on muonic and taonic observables are reported.
